HEALTH SECURITY MEASURES PROTOCOL

Your health is our priority #1 so we care.

We keep following all measures issued by Czech government and other relevant authorities. Please follow links below as well so you get first-hand information on latest updates regarding COVID restrictions.

Here are rules and recommendations for social events (last updated on Tuesday, July 20, 2021 (23:13))

Public and private events may take place with a limit of 1000 persons outdoors and **500 persons indoors**, provided that all persons upon arrival prove that one of the following conditions (O-N-T system: Vaccination - Past disease - Test) is met:

- have a negative RT-PCR test not exceeding 7 days old,
- have a negative POC (so-called antigenic) test not exceeding 72 hours old,
- have a laboratory confirmation of having recovered from covid-19 disease in the period not longer than 180 days before the day of the event,
- having got vaccinated, provided the last dose (i.e., in case of a two-dose vaccination scheme, the second one, in case of a single-dose vaccination scheme, the first one) has been administered at least 14 days prior to the event.

Also, everyone present must have a respirator without an exhalation valve of min. class FFP2 (KN95 / N95) on at all times.

A maximum of 10 people can meet without complying with the above conditions.

Before entering the event, you must meet at least one of the following conditions:

- a) O-N-T system: (Vaccination - Past disease - Test)
- b) You prove that you underwent a preventive antigenic self-test on the spot with a negative result.

Qubit as the organizer of the event is entitled and obliged to check the fulfillment of the above-mentioned conditions.

Are you travelling to Prague from abroad?

Please kindly follow latest update of the measures and [map](#) or Communication from the Ministry of Health issuing the [list of the countries](#) or parts thereof with low, medium and high risk of COVID-19 infection

When travelling to Czech republic you are required to provide some data about your trip. By providing them, you will make it possible for public health authorities to contact you, should it be discovered that you may have been infected by another person during your trip or that you yourself may be a source of infection for other passengers. If you have any questions in this regards, please contact email prijezdovyformular@mzcr.cz.

Why we follow the measures?

Due to the epidemic situation of covid-19 in the Czech Republic and worldwide, relevant authorities issues measures and regulations to prevent the spread of this disease. We keep in mind that by complying with the issued measures, we protect not only ourselves and our loved ones, but also vulnerable groups of the population. We encourage all our participants to behave responsibly and in accordance with issued measures and regulations. We remind all participants that:

You protect yourself

- Failure to do so increases the likelihood that you will become infected yourself.
- If you develop covid-19, you must go into isolation and avoid contact with other people for at least 10 days after taking the test.
- Despite the fact that covid-19 disease very often occurs mildly or completely without symptoms, a serious course cannot be ruled out either. A serious course cannot be even ruled out in young and completely healthy people.

- In the event of a severe course of the disease, you may be hospitalized and your treatment may be significantly prolonged.
- In some people who have contracted covid-19, poor health persists for several weeks after the infection (eg. exertional dyspnea, neurological problems). This also applies to young people.
- Persistent poor health can significantly disrupt your normal and work activities (eg sports activities, physical work).

You protect others

- Since you can spread covid-19 even if you do not (yet) have symptoms of the disease, it can be you who unknowingly infects your loved ones.
- Even though your illness is mild or completely asymptomatic, it may not be the case with your loved ones if you do not follow the prescribed precautions. Especially in the elderly if they have associated diseases (e.g.: diabetes, obesity, high blood pressure, immune disorders) covid-19 infection in your loved ones can have a very serious course with the need for hospitalization.
- If you do not follow the measures, you increase the likelihood that people around you will have to quarantine in the event of your infection, which can significantly disrupt their plans.
- If preventive measures are not followed, the infection spreads faster and the number of infected people increases, and with that also the number of people who require hospitalization. This can lead to congestion of the health care system, overcrowding of hospitals and lack medical staff capacity. If such a situation occurs, it will not be possible to provide health care to all those in need, including possibly you or your loved ones.
- If it is not possible to provide health care to all those in need, the number of people with a serious course of covid-19 and the number of people who succumb to the disease will increase.
